# Tokai Back Surface progressive lenses: Your vision has never been this clear!

**Tokai Back Surface** progressive lenses differentiate themselves from other progressive lens designs by simultaneously assimilating the *progression zone*, *asphericity* and *power* to the back side of the lens. This concept offers a superior optical solution, while maintaining a perfectly smooth spherical surface.

Highly advanced production techniques allow continuous monitoring of the asphericity at each particular point on the back surface. This results in superior ophthalmic performance and substantial improvement of cosmetic appearance, in a very precise and personalised design.

Therefore, Tokai's Back Surface progressive lens series, meets the individual needs of each user!

## CUSTOM MADE

Custom

Perfect Match

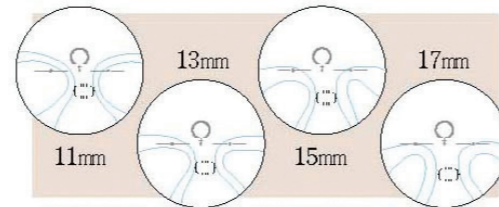

Standard

Thinner and lighter

Increased visual field of up to 35%

Reduced distortion and floating side effect up to 35%

### Corridor length

You define the corridor length:  
11, 13, 15, or 17mm.

You define the corridor length:  
9, 11, 13, or 15mm.

You define the corridor length:  
11, 13, or 15mm.

### Front Base Curve

You determine a more appropriate front curve:  
standard, deeper or flatter.

Tokai will determine the most appropriate front curve taking into consideration the balance between right and left power.

Tokai will determine the most appropriate front curve taking into consideration the balance between right and left power.

### Inset

Tokai will determine the inset per lens: from 0,0 to 5,0mm per 0,1mm.  
Custom according to all appropriate parameters.

Tokai adapts the inset according to the power.

Standard inset of 2,5mm.
