

Modecinq, the solution for high curved optical frames!

Modecinq is a custom made lens specially **designed for optical frames with higher base curves.**

Thanks to Tokai's Back Surface technology, Modecinq is **available in single vision and progressive designs.** Distortions and prismatic aberrations are reduced to a minimum, resulting in an optimal field of vision at every point of the lens.

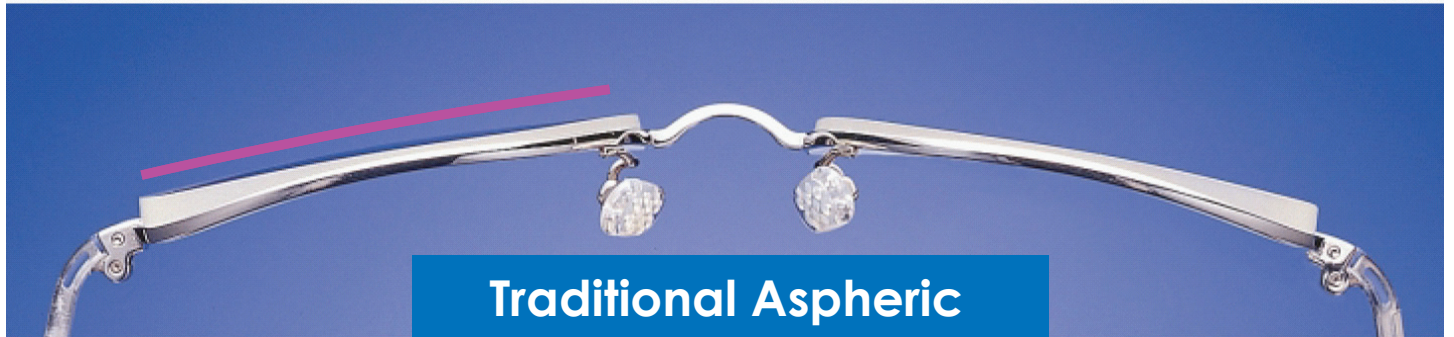

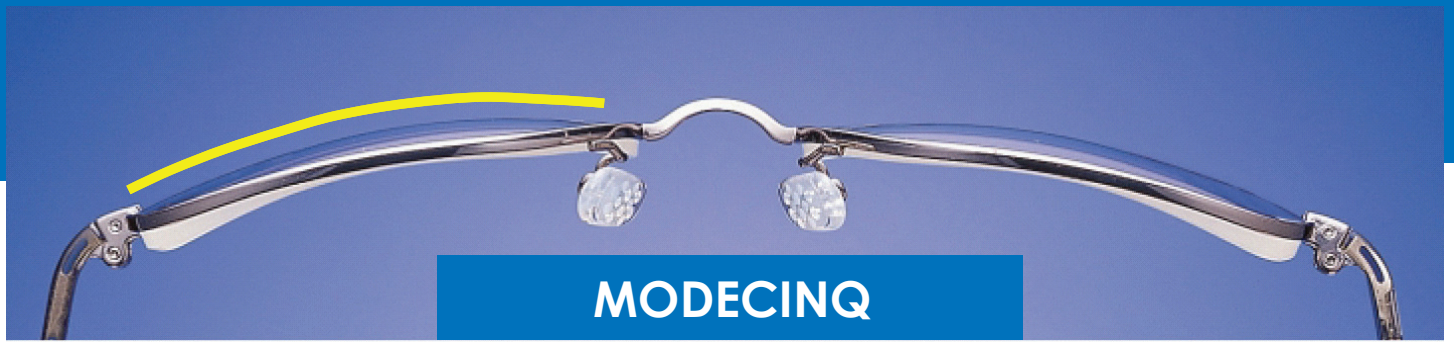

Modecinq Progressive is available in 3 base curve options – 4, 5 and 6.

Modecinq Single Vision is available in five base curve options – 3, 4, 5, 6, and 7

The wide range of base curves available, ensure the perfect fit to any curved frame.

Modecinq offers the **ideal balance between aesthetics and precision optical performance!**

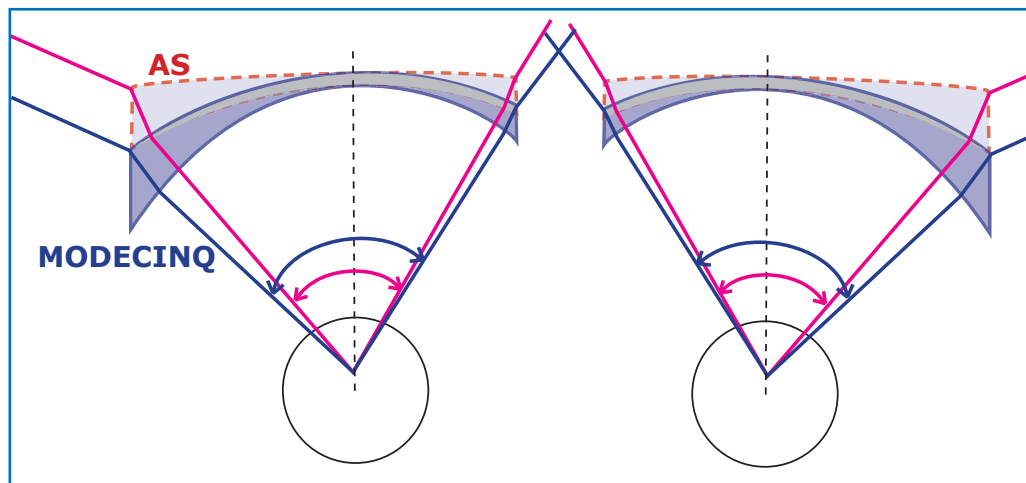

Modecinq is available in single vision and progressive designs, all made with Back Surface technology

Modecinq SV specifications:

- Back Surface **single vision** design on back curve.
- Spherical front curve.
- Base curve selection between 3, 4, 5, 6 & 7 (base 5 is used as standard).

Modecinq PAL specifications:

- Back Surface **progressive** design on back curve.
- Spherical front curve.
- Corridor length: 11 and 13 mm
- Base curve selection between 4, 5, 6 (base 5 is used as standard).
- Power compensation.

The **advantages** of combining a deeper base curve with Back Surface technology are:

- Wider field of natural clear vision
- Less distortions
- Less prismatic effect
- **Improved aesthetics**
