

NRC, a natural look and clearly visible eyes without reflections

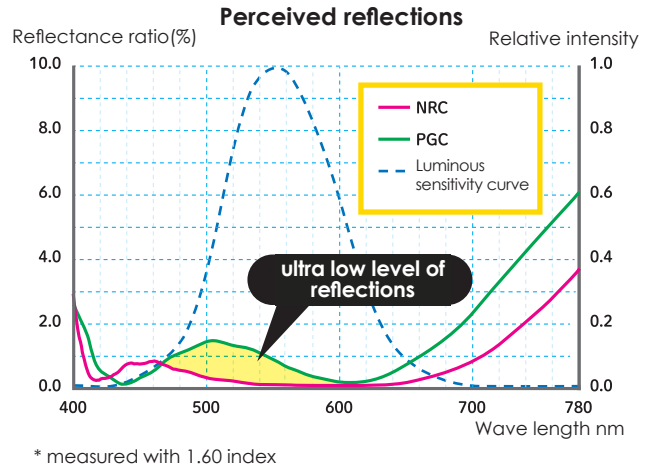

The eyes are windows to the soul. When interacting with other people directly through digital meetings or photos on social media, you want them to be able to see all of your facial expressions.

Tokai's No Reflection Coating reduces reflections on the lenses to a minimum, providing a natural look and clearly visible eyes.

NRC can be further enhanced with an additional digital filter to reduce the negative effects of blue light.

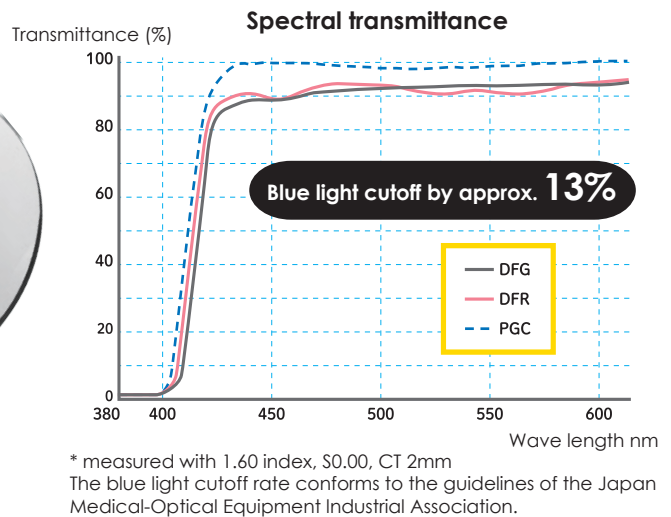

■ Tokai's No Reflection Coating achieves unparalleled low levels of perceived reflections (approx. 0.19%). This sets a new standard in luminous efficiency and reducing visible reflections.

■ NRC combined with a digital colour filter reduces blue light by approximately 13%!

The digital colour filters reduce eye strain caused by usage of digital devices. The light pale colours also give a more natural and fresh impression of the eyes. They are ideal for people seeking functionality and fashionability.

■ NRC is a hydrophobic, ultra scratch proof and anti-static coating with fluorine top layer.

[hydrophobic]
Fluorine-based treatment. Ensures high lubricity and water repellence.

NRC

Conventional MC

[ultra scratch proof]
Fluorine-based treatment ensures high scratch resistance.

Scratch test
2kg of steelwool is moved 50 times from side to side on the lens.

enlarged 400x under a microscope

NRC

Conventional MC

[anti-static]
Prevents micro scratches while wiping.
